SUMMARY

AI automation engineer and full-stack developer who ships production software. At Autolinium I build n8n automation for client businesses and was confirmed into a full-time role after my internship on the strength of that work. Independently I have delivered more than ten production n8n workflows for my own clients — chatbot automation, lead qualification and multi-platform social publishing. I am also the co-founder and developer of TellMore AI, a multi-tenant AI sales assistant SaaS that I built entirely on my own (UI/UX, frontend, backend, database, every integration, Meta app review, servers and deployment); it is a Meta Tech Provider and live with paying businesses. I hand-build my automation workflows and work AI-assisted on application code. Open to remote full-time or contract work.

TECHNICAL SKILLS

AI & Automation: n8n, Make, workflow automation, LLM integration (OpenAI API, Google Gemini, OpenRouter), RAG and vector search (pgvector), speech-to-text and text-to-speech, prompt engineering, chatbot development, AI video generation (Remotion), AI-assisted development

Full-Stack: JavaScript, TypeScript, React, Next.js (App Router), Node.js, HTML/CSS, REST APIs, webhooks, UI/UX design

Data & Backend: PostgreSQL 17, pgvector, PostgREST, Supabase, row-level security, multi-tenant architecture, database design, API design

Platform APIs: WhatsApp Cloud API, Meta Graph API (Messenger, Instagram), Meta app review and business verification, Telegram Bot API, Google Calendar, Firebase Cloud Messaging, Web Push

Delivery: Linux VPS, Docker, Caddy, self-built auto-deploy with health check and rollback, Git, GitHub Actions, Capacitor (Android), automated testing, technical documentation

EXPERIENCE

Autolinium
Chattogram, Bangladesh — Remote

AI Automation Specialist July 2026 – Present
AI Automation Intern April 2026 – July 2026

Confirmed into a full-time position after the three-month internship, on the strength of performance during it.

Design, build and deploy AI automation for client businesses using n8n, Python and JavaScript — workflow automation, API integration and the engineering around it.

- Champion — sales and office operations platform. Built the WhatsApp automation behind a customised dashboard tracking 20–25 people across the sales team and head office: attendance, template messaging, automated reminders and lead storage. (Dashboard built by a colleague.)
- Nandi Real Estate and Developers (NRD) — built the WhatsApp automation inside an ERP system for a real-estate developer. Ongoing.
- ezpzbd.com — AI EdTech platform tutoring HSC students in Physics, Chemistry and Mathematics. Worked on the platform and trained the AI tutors on board-exam content and question data.
- Built chatbots on Facebook, Instagram, WhatsApp and Telegram, plus AI-powered Facebook auto-posting, using n8n and LLMs.
- Built internal web dashboards for business operations.

Freelance — AI Automation Engineer

Own clients — Remote

Independent 2026 – Present

Won and delivered automation work directly for my own clients, separate from my employment.

- Delivered 10+ production-ready n8n workflows across client businesses.
- Evalora (evalorabd.com) — built their chatbot automation workflow.
- Lead collection and qualification workflows — capture, enrich and score leads automatically before they reach a person.
- Multi-platform social auto-posting — publishing to several platforms from one workflow, in two versions: AI-generated content, and rule-based without AI.

TellMore AI

Remote

Co-Founder & Developer August 2026 – Present

Built a multi-tenant AI sales assistant SaaS end to end, alone: UI/UX design, frontend, backend, database and API design, every integration, the Meta developer app and its verification, billing, the Android apps, the servers and deployment. Live with paying businesses; Meta Tech Provider, business verified by Meta.

SELECTED PRODUCT — TELLMORE AI

Multi-tenant AI sales assistant SaaS · tellmoreai.com · co-founder, built the product solo · Meta Tech Provider · code shown on request

Answers customers in Bangla, Banglish and English across Messenger, Instagram, WhatsApp and a website widget, from each business's own product catalogue and uploaded documents; understands voice notes and product photos, replies to post comments and hands hard chats to the business's own sales team.

- Architecture — Next.js 14 (App Router) on a self-managed Linux VPS: PostgreSQL 17 with pgvector, PostgREST and file storage in Docker behind Caddy, with an auto-deploy that builds, health-checks and rolls back by itself.
- Multi-tenancy — tenant isolation enforced by the database through row-level security on every table, rather than by application code.
- Interchangeable AI providers — OpenAI, Google Gemini or OpenRouter, only one active at a time, enforced by a database constraint; every stored embedding records the model that produced it, so vectors from different providers can never be compared.
- Platform integrations — Meta Graph API, Instagram API and WhatsApp Cloud API with HMAC webhook signature verification and signed OAuth state; completed Meta app review and business verification, and became a Meta Tech Provider.
- Sales team — the AI answers first and hands a chat to the right team member; role-based access (agent, orders, accounts, manager, front desk, specialist, catalog) and co-owners, enforced on the server.
- Mobile — two native Android apps (Capacitor) with Firebase Cloud Messaging and Web Push.
- Billing — packages, add-ons and pay-as-you-go through the PayStation payment gateway, with server-side transaction validation.
- Quality — 256 automated test suites, and written documentation covering architecture, database, security and error handling.
- Marketing automation — an AI video pipeline (Remotion + text-to-speech) that makes voiced Bangla short videos, published to Facebook and Instagram on a daily schedule.

EDUCATION

Bachelor of Pharmacy (B.Pharm) 2020 – 2024

Northern University Bangladesh

Moved into software after teaching myself automation and development during the degree; building full time since.

CERTIFICATES

- Experience Certificate, Autolinium — AI Automation Specialist. Ref. AUT/HR/EXP/2026-015, issued 10 September 2026.

- Certificate of Completion, Autolinium — three-month AI Automation internship, April – July 2026.
